either L-glutamine or ammonia as the source of nitrogen (I
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Pfam; PF00117; GATase;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (last) step.
SUBUNIT: Homotetramer (By similarity).
SIMILARITY: Belongs to the CTP synthase family.
SIMILARITY: Contains 1 type-1 glutamine amidotransferase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              similarity).

CATALYTIC ACTIVITY: ATP + UTP + NH(3) = ADP + phosphate + CTP.

ENZYME REGULATION: Allosterically activated by GTP, when glutamine is the substrate. Inhibited by CTP (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 PATHWAY: Pyrimidine biosynthesis; conversion of

                                                                                                                                                                                                                                                                              Bacteriol. 185:2330-2337(2003).
- FUNCTION: Catalyzes the ATP-dependent amination either L-glutamine or ammonia as the source of r
                                                                                                                  Similarity).

CATALYTIC ACTIVITY: ATP + UTP + NH(3) = ADP + phosphate + ENCZYME REGULATION: Allosterically activated by GTP, when g is the substrate. Inhibited by CTP (By similarity).

PATHWAY: Pyrimidine biosynthesis; conversion of UMP to CTP
   SUBUNIT: Homotetramer (By similarity).
SIMILARITY: Belongs to the CTP synthas
SIMILARITY: Contains 1 type-1 glutamin
                                                                                                 (last) step.

-i-FUNCTION: Catalyzes the ATP-dagendent amination of UTP teither L-glutamine or ammonia as the source of nitrogen
                                                                                                                                                                                                                                                                                                                                                                                                          STRAIN=CMCP6;
                                                                                                                                                                                                                                                                                                                                                                                                                          SEQUENCE FROM N.A.
                                                                                                                                                               (last) step.
SUBUNIT: Homotetramer (By similarity).
SIMILARITY: Belongs to the CTP synthase family.
SIMILARITY: Contains i type-1 glutamine amidotransferase domain.
                                                                                                                                                                                                                                  CATALYTIC ACTIVITY: ATP + UTP + NH(3) = ADP + phosphate + ENZYME REGULATION: Aliosterically activated by GTP, when g is the substrate. Inhibited by CTP (By similarity).

PATHWAY: Pyrimidine biosynthesis; conversion of UMP to CTP
                                                                                                                                                                                                                                                                                                 similarity.

SIMILARITY: Belongs to the CTP synthase
SIMILARITY: Contains 1 type-1 glutamine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                similarity).

CATALYTIC ACTIVITY: ATP + UTP + NH(3) = ADP + phosphate + CTP.

ENZYME REGULATION: Allosterically activated by GTP, when glutaming the substrate. Inhibited by CTP (By similarity).

PATHANY: Pyrimidine biosynthesis; conversion of UMP to CTP; third
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (last) step.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              E82074; E82074.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  FUNCTION: Catalyzes the ATP-dependent amination of UTP to CTP either L-glutamine or ammonia as the source of nitrogen. CATALYTIC ACTIVITY: ATP + UTP + NH(3) = ADP + phosphate + CTP. ENZYME REGULATION: Allosterically activated by GTP, when glutaris the substrate. Also activated by magnesium. Inhibited by CT and by divalent metal ions such as copper and zinc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   PATHWAY: Pyrimidine biosynthesis;

SUBUNIT: Homotetramer (By similarity).
SIMILARITY: Belongs to the CTP synthase family.
SIMILARITY: Contains I type-1 glutamine amidotransferase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CATALYTIC ACTIVITY: ATP + UTP + NH(3) = ADP + phosphate + ENZYMB REGULATION: Allosterically activated by GTP, when 9 is the substrate. Inhibited by GTP (By similarity).

PATHWAY: Pyrimidine biosynthesis; conversion of UMP to CTP

-!- SUBUNIT: Homotetramer (By similarity).
-!- SIMILARITY: Belongs to the CTP synthase family.
-!- SIMILARITY: Contains 1 type-1 glutamine amidotransferase domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   similarity).

-:- CATALYTIC ACTIVITY: ATP + UTP + NH(3) = ADP + phosphate
-:- ENZYME REGULATION: Allosterically activated by GTP, wher
is the substrate. Inhibited by CTP (By similarity).
-:- PATHWAY: Pyrimidine biosynthesis; conversion of UMP to C
                                                                                                                                                                                                                                                                                                                             Pfam; PP00117; GATase; 1.

                                                                                                                                                                                                                                                                                            similarity).

CAPALYTIC ACTIVITY: ATP + UTP + NH(3) = ADP + phosphate + CTP.

ENZYME REGULATION: Allosterically activated by GTP, when glutamine
is the substrate. Inhibited by CTP (3y similarity).

PATHWAY: Pyrimidine biosynthesis; conversion of UMP to CTP; third
                                                                                                                                                                                                                                           SUBUNIT: Homotetramer (By similarity).
SIMILARITY: Belongs to the CTP synthase family.
SIMILARITY: Contains 1 type-1 glutamine amidotransferase domain.
                                                                                                                                                                                                                                                                                                                                                                                                    FUNCTION: Catalyzes the ATP-dependent amination of UTP to either L-glutamine or ammonia as the source of nitrogen (
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            541
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               481
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 479

-!- SUBUNIT: Homotetramer (By similarity).
-!- SIMILARITY: Belongs to the CTP synthase family.
-!- SIMILARITY: Contains 1 type-1 glutamine amidotransferase domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Complete

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Similarity).

CATALYTIC ACTIVITY: ATP + UTP + NH(3) = ADP + phosphate + CTP.

ENZYME REGULATION: Allosterically activated by GTP, when glutamine is the substrate. Inhibited by CTP (By similarity).

PATHWAY: Pyrimidine biosynthesis; conversion of UMP to CTP; third
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        FUNCTION: Catalyzes the ATP-dependent amination of UTP to either L-glutamine or ammonia as the source of nitrogen [F
